DETAILED ACTION

Response to Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention.

Species 1, claims 25 and 37; required one or two ports for at least having one of sending and receiving either command or ballast configuration.

Species 2, claims 59; required at least one port only sending message controlled by programmable microprocessor.

Species 3, claims 26-33, 38-44; required a port for sending message to particular device.

Species 4, claim 60 and 61; required a port for sending message to particular device and sending message for indicating a status of the device controlled by programmable microprocessor.

Species 5, claims 34-36 and 45-48; required one port for only receiving and a memory.

Species 6, claim 62-64; required at least three ports for communication.

Art Unit: 2821

Species 1 and 2 relate as combination and subcombination, wherein the claim 25 is generic related to Species 1 and 2.

Species 3 and 4 relate as combination and subcombination, wherein the claim 26 is generic related to Species 3 and 4.

Species 5 relates to Species 1 and 2 as mutually exclusive species while relating to Species 3 and 4 as subcombinations usable together.

Species 6 relates to all species 1-5 as subcombinations usable together.

The above Species drive to different search area since they relate as combinations and/or subcombinations or mutually exclusive species.

The requirement is still deemed proper and is therefore made FINAL.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Lansing discloses an electronic ballast (Fig. 21) for driving discharge lamp (408), comprising

An inverter (405, 406) for producing a high frequency drive voltage for driving a lamp current in the discharge lamp (col. 16, line 56);

A microcontroller (24) electrically connected to the inverter (21) for controlling the inverter (405, 406) via a driving circuit (420) to control the lamp current; and

An IR port in electrical communications (45) with the microcontroller (24) for sending messages comprising at least one of a command and ballast configuration (col. 10, lines 55-58), wherein ports (from E2 or 421) for at least receiving a message.
